

# GREASE IS A BIG PROBLEM!

Like cholesterol in arteries, grease restricts the flow of waste water by accumulating on the walls of the sewer pipes. When the flow becomes too restricted, the waste water backs up and overflows the system. Grease buildup is both a human and environmental health hazard!

# GREASE PREVENTION PROGRAM

# DON'T WASH YOUR GREASE, OR YOUR MONEY, DOWN

## THE DRAIN!

The Town of Boone spends a lot of your tax money every year clearing blockages and cleaning up sewer overflows caused by grease. To help reduce this problem, the Town of Boone has established the Grease Prevention Program.

Each residential and Food Service Establishment can help by following the *Prevention and Good Housekeeping* tips, found in this brochure. Food Service Establishments are also required to participate in the *Grease Prevention-Trap Inspection Program*.

# PREVENTION AND GOOD HOUSEKEEPING TIPS

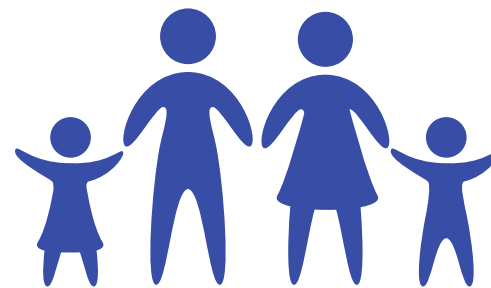

Deposit liquid and solid food scraps into the garbage or composting bin, not the disposal.

Don't pour hot grease into the drain. Wait for it to cool then dispose of it in the garbage

Dry wipe utensils, dishes and other surfaces prior to washing

Educate your family on proper grease disposal

# GREASE PREVENTION-TRAP INSPECTION PROGRAM:

Required Participation for the Following Food Service Establishments (FSE):

- Restaurants
- Food Counters
- Cafeterias
- Bars/Clubs
- Hotel/Lounge Kitchens and Bars
- School Kitchens
- Nursing Home Kitchens
- Day Care Center Kitchens
- Hospital Kitchens
- All Other Establishments where Grease can be Introduced into the Collection System
